

The Vollrath Company L.L.C.

Model # 6512-88

Wall Mounted Napkin Dispenser

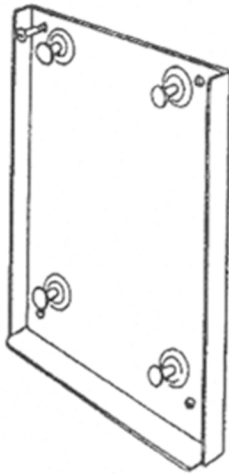

FIG A

Use four screws to secure the dispenser mounting bracket to a wall, cabinet, or counter. NOTE: If securing the mounting bracket to plaster or drywall, use screw anchors.

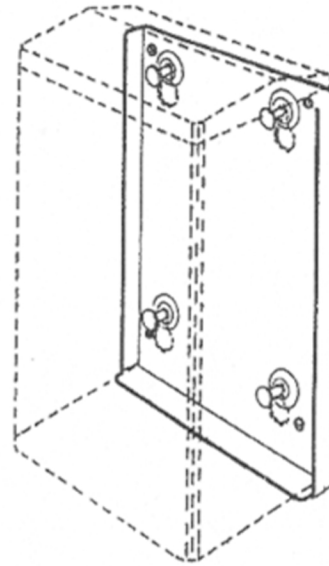

FIG B

With Dispenser mounting bracket in place, you can now easily mount the dispenser by lining up the four tear drop shape openings in the bottom of the dispenser with the four flat head rivets of the mounting bracket.

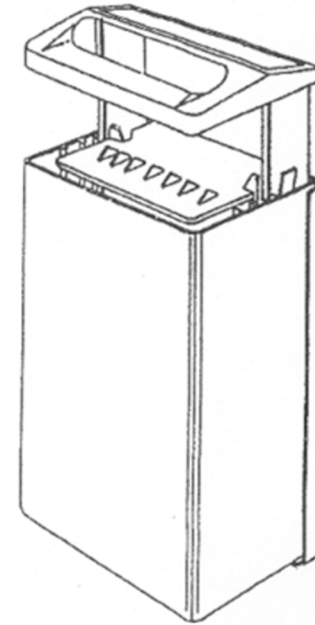

FIG C

Refilling of the dispenser can be accomplished without removing the dispenser from the mounting bracket. Simply insert your index finger through the face plate opening and push the white tab located on the right hand side approximately 1 1/2" from the bottom of the unit (see enclosed napkin dispenser instructions). While pushing this white tab, lift up on the face plate and the dispenser will open. With the dispenser open, your unit can be filled quickly and easily. After filling, close the dispenser and it will latch automatically.

NOTE: To clean your napkin dispenser or to completely remove the drawer, you may wish to take the dispenser off the mounting bracket for easier access. When removing the unit from the mounting bracket, you should steady the dispenser with one hand on the face plate and lift the unit off the bracket by supporting the dispenser bottom. Repeated lifting of the dispenser by the opening in the face plate may damage the unit.
